

# PRESET TORQUE WRENCHES

## CLICK TYPE - WITH INTERCHANGEABLE HEADS

### Sensitive and accurate within 4% of setting

- Large selection of stock heads in english and metric sizes (see pg. 6)
- An audible click and feel impulse results when the preset torque value is reached.
- Head changes are quick and easy. A spring loaded pin insures positive attachment.
- Change torque without special tools. Torque analyzer required.
- All heads produce the same distance from the end of the wrench to the center of the fastener (common centerline). Therefore, constant torque values are maintained when changing heads.

<u>MODEL</u>	<u>OVERALL* LENGTH</u>	<u>TORQUE RANGE</u>	
NTC-100	6-7/8"	10 to 100 in-lbs	11 to 110 cm-kg
NTC-200	8-7/8"	20 to 200 in lbs	22 to 220 cm-kg

\*Overall length includes the length of the handle plus the length of the head up to the center of the fastener.

Torque handles can be color coded for pre-set value identification.  
Exceeds all government specifications.

#### ***To order, specify***

- Torque handle part number
- Head part number if required (see pg. 6)
- Torque setting
