

# PRESET TORQUE WRENCHES

## SLIP TYPE - WITH INTERCHANGEABLE HEADS

### Sensitive and accurate within 3% of setting

- Unique slipping action accurately tightens the smaller range of fasteners. Unique cam-over action is idiot proof. Fasteners can never be over-torqued.
- Large selection of interchangeable heads in english and metric sizes (see pg. 6)
- Head changes are quick and easy. A spring loaded pin insures positive attachment.
- All heads produce the same distance from the end of the wrench to the center of the fastener (common centerline). Therefore, constant torque values are maintained when changing heads

<b>MODEL</b>	<b>OVERALL* LENGTH</b>	<b>TORQUE RANGE</b>	
NTQ-12	5.5"	1 to 12 in-lbs	1.1 to 14 cm-kg
NTQ-100	6.0"	10 to 100 in-lbs	11 to 110 cm-kg

\*Overall length includes the length of the handle plus the length of the head up to the center of the fastener

Torque handles can be color coded for pre-set value identification  
Exceeds all government specifications

### **To order, specify**

- Torque handle part number
- Head part number if required (see pg. 6)
- Torque setting
