Instructions to Calculate

Correct Joint Size 22

Custom Application Sheet 23

Less Downtime, More Lifetime.

Apex has been supplying universal joints for military and commercial applications since 1933. Over these 70+ years we have provided engineered solutions for thousands of demanding applications worldwide. Today Apex is recognized as the **"Less downtime, more Lifetime"** leader in pin and cube universal joint designs and applications. Our primary markets are:

Government/Military Applications

Apex meets the demanding requirements military applications such as gun systems, remote valve control, Unmanned Aerial Vehicles (UAV), thrust vector control systems, and fan drive universal joints.

Aerospace

Commercial, military, business jets, and private aircraft all utilize Apex universal joints. Typical uses include flap/slat actuation, "hinges" for cargo doors and windows, mechanical linkages for steering, trim control and door latching mechanisms. Apex double universal joints have even been used to replace gear boxes. These high strength-to-weight ratio universal joints have excellent torsional freeplay (i.e., backlash) characteristics suited to this environment.

Off-highway/ Construction Equipment

Applications include steering columns, a variety of mechanical linkages and power take offs. Also included are custom designs for specialty equipment (e.g. fire trucks.)

Performance Racing

Our MS series of universal joints have become the standard by which all other universal joints are measured. The same aerospace design considerations are applicable in this competitive market. Primary uses are for steering, shift linkages, and chassis adjustment applications.

Industrial Power Transmission

This represents the most diverse area of applications. Some typical uses are steel leveling equipment, links to conveyor systems, pump drive systems, multiple spindle drill heads, bowling alley pin setters, canning equipment, centerless grinders, bottling machines, industrial sewing machines, control linkages, mixing equipment, packaging machinery, and industrial scales. This list represents only a fraction of the applications where Apex universal joints are used. Our “quick-change” universal joints are extremely popular in this area. They eliminate precision alignment requirements and allow for quick repair of critical machinery and assembly/conveyor lines.

Apex universal joints consistently deliver performance in process industries where continuous operation is the norm and equipment availability/uptime is critical.

Whatever your application, you can depend on Apex universal joints to provide rigidity and exceptionally high strength-to-weight ratios with less deflection, superior fatigue resistance and high overload capacity. Add to this Apex’s wide selection of elastomeric covers that seal lubrication in and protect the universal joint from harsh operating environments (e.g., dirt, water, abrasive slurry, etc.), and you have unsurpassed reliability for your application. All of these features can be incorporated into single, double, telescopic, or quick-change universal joints. We specialize in make-to-order products engineered to optimize your application and reduce operating costs. Apex is the Performance Authority for pin-and-cube universal joints.

Apex Offers A Variety of Solutions For Your Standard or Custom Application

If your application calls for something other than our standard 300 or 400 series universal joints, Apex can provide it for you. Our engineers are ready to solve your application problems. Some of the options available are:

Universal Joint Configurations:

In addition to the standard plain bearing design, there is also a “Press Fit” design which improves fatigue life in reverse loading applications. For higher RPMs, we offer a needle bearing line.

Materials:

Alloy steels (4140, 4150, 4340), Austenitic stainless steel (303, 304, 316, Nitronic 60), Martensitic stainless steel (416, 440C, 13-8, 17-4, 15-5), carbon steel (1020, 8620) and specialty steels (such as Stressproof and S-2 Modified).

Bearings:

Apex utilizes plain, rolling element and polymer bearings in its designs. Selecting the right bearing maximizes the performance the universal joint, minimizes/eliminates maintenance, and increases the life of the universal joint.

Heat Treatment:

Apex proprietary heat treat, selective through hardening, induction hardening, and case hardening.

Surface Treatment:

Light oil, cadmium (electrolytic and vacuum), electrolytic zinc, nickel (electrolytic and electroless), black oxide, phosphate (manganese and zinc), solid film lubricant, and a variety of paint solutions.

Cover Materials:

Silicone, Nitrile, EPDM, Viton, Neoprene, FDA approved food polymer, vinyl, Silicon/Dacron, Fluoro-Silicon/Nomex.

Cover Styles:

Bulbous, flat, and convoluted.

Lubricants:

High pressure gear oil, “natural” grease, synthetic grease, synthetic grease with additives (improves “dry start” characteristics), non-outgassing grease, food grade grease, graphite powder, and solid film lubricant.

Geometry:

Square, Hex, Threaded, splines (involute or straight-sided), gears, split collar with lug bolt, keyways, precision diameters (.0002”), gears, whistle-notch, and quick-release. Where applicable, these are available in male or female.

Additionally, multiple features can be combined on the same hub. Apex engineers utilize these options daily to design the product right for your needs. From extreme loading (including seismic) to harsh environments (-80° to 600° F), Apex is your Total Solution Source.

Quality

Apex universal joints are supplied from our Dayton facility which has AS9100 certification. AS9100 is a widely adopted and standardized quality management system for the aerospace industry and incorporates fully the entirety of the current version of ISO 9001.

Our Dayton facility, manufacturing site of Apex Universal Joints, has AS9100 Quality System Certification. The driving force behind the implementation of the Quality System is the commitment “to provide our customers with the best value delivered by offering only products and services that meet or exceed their expectations.”

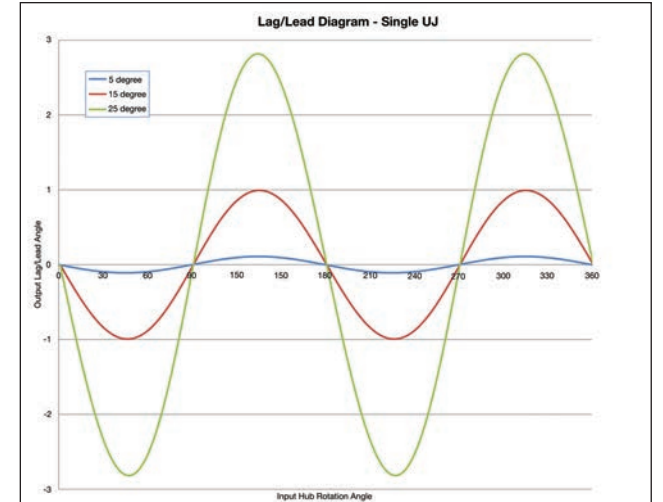

Apex design engineers utilize 3-D solid models and finite element analysis (FEA) to develop and evaluate different design options.

The Apex Total Solution Designed Into Every Universal Joint

The illustration below highlights many of the common design features that have made Apex the Market Leader in providing **“less downtime, more lifetime”** for some of the most demanding applications. At the heart of this success is engineering excellence that created and continues to refine this design to meet the ever increasing challenges of new applications. To further compliment this, add Apex’s manufacturing capabilities and its proprietary heat-treat processes. The result is a “balanced” design that provides the highest strength-to-weight ratio pin and cube universal joint available. It is not uncommon for Apex to outperform the competition by at least 30% in strength for equivalent size products.

When you bring your applications to Apex, you will be supported by a technical staff that has the in-house capability to perform Finite Element Analysis (FEA), 3-D Solid Modeling, Metallurgical analysis, non-destructive testing, functional testing, and prototype production.

The most useful tool, however, is the knowledge gained from providing application solutions for over 60 years. Use the application sheet at the back of this catalog to find out how Apex universal joints can improve the performance of your application.

Short delivery times required for replacement parts or product development samples can be produced in the “Short Run Cell”.

This cell has all of the manufacturing capability to produce almost any configuration universal joint

in an expedited manner. A single machinist takes ownership of the job and is responsible for it from production to final assembly. Please ask about this service if you have an expedited need for a small quantity of parts.

Apex has extensive in-house testing and validation capabilities.

300 Series

- Single universal joint with operating angles up to 35 degrees
- Full range of sizes from 3/8" to 2"
- Ultimate static strength up to 26,040 lbs-in
- Available with or without lubrication covers
- Standard cover supplied is Neoprene or Nitrile, others available
- Select from solid hubs, bored hubs and bores with keyways
- Hubs do not need to be the same on both ends
- Field/customer machinable alloy steel
- Plating available upon request

Note: The first number(s) after the 300 or 400 series prefix represent the outside diameter of the universal joint in 16th's of an inch. A number following this is the diameter of the bore in 16th's of an inch. If the product has a keyway it will be represented by a number following the bore size and is in 32nd's of an inch. For example, 300-20-12-6 is a 1.25" O.D. (20/16") universal joint with a .75" (12/16") bore on each end and a .188" (6/32") keyway.

400 Series

Operating angles up to 35 degrees

Sizes from 2-1/2" to 4"

Ultimate static strength up to 139,200 lbs-in

Available with or without lubrication covers

Select from solid, bored, and keyway hubs

In addition to the standard items listed, each hub can have a unique interface geometry

Available with plain bearings, bronze-sleeved bearings (field-replaceable wear item to extend universal joint life), and rolling element

Plating available upon customer request

Field/customer rebuild kits available

Replacement Kits

UJ-Kit-2.5	2.5"
UJ-Kit-3.0	3.0"
UJ-Kit-4.0	4.0"

Replacement Kits include the following:
1-Cube, 1-Main Pin, 2-Steel Bushings,
2-Bronze Bushings, 1-Bolt with Nut

400 Series - Uncovered

400 series universal joints are available in stainless steel or coated for use in food grade and petrochemical applications. The replaceable bronze bushing facilitates visual inspection of the wear which can eliminate unplanned downtime. The replaceable components also lower the total cost associated with coupling replacement.

Standard uncovered joints will be supplied with or without cover groove

Double - Uncovered

Add F to part number for Flat Cover.
Add C to part number for Bulbous Cover.

Metric and special sizes available upon request. Please call or fax form at the back of catalog.

Make routine drive train changes and repairs faster than ever

Quick-Change design able to be replaced in seconds without tools

Eliminates the need for time-consuming alignment of motors

Telescopic feature allows for dynamic length change

Available from 3/8" to 4" diameter up to 12 feet long

Can be covered to extend service life

Also available as axially free (no spring) for fixed retention

Variety of connecting shafts available to meet application needs

Apex Telescopic/Quick-Change universal joint assemblies consist of two universal joints mounted at opposite ends of a special spring-loaded connector. Spring tension holds the assembly in driving position, yet permits instant removal by compressing one end of the assembly and lifting it clear.

Proper alignment (as shown above in the "correct" diagram) is critical for telescopic applications.

Apex military standard universal joints are designed to strict specifications to assure unsurpassed strength-to-weight ratios, torsional and axial overload capacity and low torsional deflection. Built to withstand the most demanding conditions, Apex military standard joints require minimal maintenance; in

most cases, the original may last the service life of the vehicle or machine. Apex military standard joints are not adversely affected by fretting corrosion or Brinelling from vibration, shock loads or overloads. Available in heavy-duty 271 Series or light-duty 270 Series, Apex military standard universal joints can be ordered with or without protective lubrication covers. Consult your Apex representative for application details.

High rigidity means low deflection rates

The deflection curves below prove the axial and torsional strength of Apex military standard universal joints. You get maximum overload protection, trouble-free operation and long service life.

- Ideal for high capacity, critical applications**
- Hand-assembled needles eliminate torsional free-play/"Backlash"**
- Designed for continuous duty**
- Available in single, double and telescopic designs**
- Midget grease fittings in hubs allow field lubrication**
- Elastomeric cover optional for harsh environments**
- Ideal for applications over 2000 rpms**
- Meet performance requirements of SAE AS39631**
- Operating angles up to 25 degrees**
- Shaft/hub configurations designed to meet your application needs**

1. Multiply operating speed (in RPMs) by operating angle (in degrees) to get the RPM-working angle factor (X-Axis).

Intermittent Operation Parameters:

Operating angle less than 5°: On time must not exceed 50% cycle time and cannot be greater than 5 minutes.

Operating angle 5°-10°: On time must not exceed 30% of total cycle time and cannot be greater than 4 minutes.

Operating angle greater than 10°: On time must not exceed 20% of total cycle time and cannot be greater than 3 minutes.

For Intermittent Operation:

2. Find the intersecting point between transmitted torque (Y-Axis) and RPM-working angle factor (X-Axis).
3. Choose the universal joint performance curve which is directly above the intersecting point from Step 2.

For Continuous Operation:

2. Find the intersecting point between 2 times the transmitted torque (Y-Axis) and RPM-working angle factor (X-Axis).
3. Choose the universal joint performance curve which is directly above the intersecting point from Step 2.

Request for information only – this is NOT an order. Important: To expedite quote, fill out form completely and FAX to 937-228-1736 or use the online form at <http://apexuniversal.com/UJquote.cfm>.
